- 1. This form has two sections. Section A contains information required by the University Senate and Registrar's office and Section B contains information required by two external entities, the CPE (Council on Postsecondary Education) and SACS-COC (Southern Association of Colleges and Schools Commission on Colleges). Although only Section A is required for University Senate approval, every question must be answered to receive CPE approval. Please write "not applicable" wherever that is the appropriate response, leaving no area blank.
- 2. The CPE requires that a pre-proposal and full proposal be submitted. The pre-proposal is submitted after a proposed program has received college-level approval. Answers to questions identified with a * by the question number on this form should be used for the CPE's pre-proposal. Such questions are in both Section A and Section B. Please email institutionaleffectiveness@uky.edu for more information about the CPE's pre-proposal process. The CPE's full proposal requires completion of both Sections A and B of this form and is submitted after approval by UK's Board of Trustees.
- 3. Once approved at the college level, your college will send the proposal to the appropriate Senate academic council (HCCC and/or GC) for review and approval. Once approved at the academic council level, the academic council will send your proposal to the Senate Council office for additional review via a committee and then to the Senate for approval. Once approved by the Senate, the Senate Council office will send the proposal to the appropriate entities for it to be placed on an agenda for the Board of Trustees. The contact person listed on the form will be informed when the proposal has been sent to committee and other times as appropriate.

| | ram Overview | | | | | |
| 2a* | Provide a brief description of the proposed program. (300 word limit) The Master's of Science in Research Methods in Education (RMinE), offered by the Department of Educational Policy Studies and Evaluation, will provide students training for careers in settings such as academic institutions, school districts, state and federal agencies, healthcare, and certification, licensing and testing organizations. Developing research knowledge and skills within a problem-of-practice framework, enrolled students will learn to apply research methods, techniques and constructs to real world education settings, issues, and data sets. The M.S. degree requires students to complete 36-credit hours and the program will be available entirely online, asynchronous. It is anticipated that all required courses will be available for on-line delivery by Spring 2015. Students enrolled in the program will develop a foundation in basic research methods in education, while completing a focused area of emphasis: quantitative methods, evaluation, or research design. The interdisciplinary program will cross fields of study within education, drawing from perspectives in policy, psychology, pedagogy and history. This unique approach should attract those wanting to develop academic and applied research skills, undertake commissioned research or evaluations, or progress to doctoral study, as well as those already working as a researcher or evaluator. Components of the program will also support undergraduate education core in quantitative inferential reasoning and offer content to many existing graduate programs across UK. | | | | | |
| | | | | | | |
| 2b | What is the need for the propo accrediting/professional/gover | , - | | _ | • | |
| | accrediting/professional/government body expressed a need for this type of program? (300 word limit) There are presently no similar programs in the state. There is a strong desire for quantitative analytical skills and especially for evaluators, as evaluation has become crucial in the public and private sectors. The program provides a valuable skillset that meets student and employer needs. Furthermore, the availability of the program on-line allows for access to students throughout the state, nation, and world. According to the Online College Students 2014 report, online teaching and learning is growing in higher education in the United States. The most important criteria in student selection of an online institution include overall reputation of the college or university (25%), no set class meeting times (19%), recognized in your field as a high-quality college or university (14%) and students never have to visit campus during their study (13%) (p.14). (Clinefelter, D. L. & Aslanian, C. B., (2014). Online college students 2014: Comprehensive data on demands and preferences. Louisville, KY: The Learning House, Inc. Retrieved from http://www.learninghouse.com/wp-content/uploads/2014/06/2014-Online-College-Students-Final.pdf . The University of Kentucky is recognized in the field, and this program offers the flexibility and features students tend to seek in an online program. This degree prepares individuals for work in many careers listed in the U.S. Department of Labor's Top 50 Fastest Growing Occupations with a Master's degree or higher level of education Mathematician (20 th), | | | | ing in higher e institution include gnized in your field g their study (13%) nsive data on Students-Final.pdf. and features students ment of Labor's Top | |

NEW MASTER'S DEGREE Page 2 of 46

³ Programs are effective the semester following approval. No program will be made effective unless all approvals, up through and including Board of Trustees and CPE approval, are received.

Administrators are also among the top 50 occupations with the most openings (Bureau of Labor Statistics, Office of Occupational Statistics and Employment Projections. *State and national employment trends*. Retrieved from http://www.careerinfonet.org).

2c* (similar to 11a) List the program objectives. These objectives should deal with how students will benefit from the program, both tangibly and intangibly. Give evidence that they will benefit. (300 word limit)

There are three primary program objectives. The first objective is to establish a high-quality graduate degree that fills an important academic gap in higher education. The need for quantitative data and quality evaluation services is continuing to grow as data-driven decision making and accountability become increasingly important in the public and private sectors. The number of individuals who have the skillset to meet this demand, however, is small, with even many highly educated individuals lacking the full range of quantitative reasoning and research method skills needed to meet employer demands. This program will focus on providing the quantitative reasoning and research methods skills that employers are seeking without requiring students to commit to a full Ph.D. program. Few programs such as this currently exist and development at this stage allows the University of Kentucky to be at the forefront of innovation in the field.

The second objective is to develop a research based program which can be accessed by both traditional and non-traditional students throughout the state, country, and internationally, who are interested in education research methods but may not have physical access to the Lexington campus. This master's program helps to make the university more diverse and inclusive, and provides educational access to groups, such as working individuals and those living in rural areas, who have historically had higher-education access issues.

Finally, this program seeks to serve as an income-generating program for the department. The on-line nature of the program allows for widespread access and ideally large enrollment with little strain on present department resources. Additional income would allow for the department to offer more scholarships, assistantships, hire new faculty, and take on new projects without the need to request additional funds from the state, university or private donors.

2d* List the student learning outcomes (SLOs) for the proposed program. (300 word limit) (More detailed information will be addressed in Section A, part 5.)

A series of intended student learning outcomes has been developed in collaboration with the college, department, and stakeholder groups, related to specialized knowledge, intellectual skills, and applied learning. Specialized knowledge is reflected in the outcome that students leave the program with advanced ability and knowledge of quantitative methods, evaluation/assessment, or research design. Furthermore, students are expected to have the ability to demonstrate these specialized skills through the evaluation of others' work and the production of their own work. Quantitative methods, evaluation/assessment, and research design are all specialized as they require specific knowledge of advanced theoretical and analytical techniques which go beyond what the average individual can learn on their own or through work experience. Intellectual skills are reflected in the student learning outcome which reflects the ability of students to develop research questions and apply appropriate quantitative techniques. In addition, it is expected that students will leave the program with the ability to develop research plans and studies which address stated research questions, further demonstrating they have refined, applicable, intellectual skills. Finally, the program is largely rooted in the applied learning principle with student learning objectives being focused on skill-based competency. Students at the end of the program are expected to be able to implement an evaluation, create and test an assessment, or design and conduct an advanced quantitative research study. Furthermore, it is expected that students leaving the program will be able to identify needs in their respective fields where they could apply their specialized

NEW MASTER'S DEGREE Page 3 of 46

| | skills. Given the methods focus of this program, students are expected to develop their specialized skillset and be able to apply it when appropriate. |
|-----|---|
| | |
| 2e | Provide the rationale and motivation for the program. Give reference to national context, including equivalents at benchmark institutions. (150 word limit) |
| | The RMinE program provides students with research knowledge and skills within a problem-of-practice framework, where students will learn to apply research methods, techniques, and constructs to real world education settings, issues, and data sets. It will be inter-disciplinary, crossing fields of study within education, drawing from perspectives in policy, psychology, pedagogy and history. Components of the program will also support the undergraduate education core in quantitative inferential reasoning and offer content to many existing graduate programs across UK. The RMinE program is unlike any other program currently offered at the University of Kentucky, and has few comparative programs across the country. The focus on educational research methods is something that is beginning to appear at the graduate level, and the development of the RMinE at this point provides the university with the opportunity to be a leader in the field. Furthermore, students have the option of completing the program completely online. |
| 2f | Describe the proposed program's uniqueness within UK. (250 word limit) |
| | The RMinE was developed to be both highly practical and applicable in real-world settings, and accessible to |
| | students who are traditionally hard to reach, such as working professionals, students with families, students |
| | without transportation, those who are located in remote areas, and international students. This degree was |
| | designed for individuals working in the education field, among other fields, who need research methods skills to |
| | better conduct their work in geographic areas where it may be challenging to recruit highly skilled educational |
| | researchers or evaluators. Students can complete the program entirely asynchronously on-line. The RMinE |
| | degree allows students at the University to specialize in applied skills in a range of research methods useful in |
| | education and social science research. Thus, students focus on methods, rather than content. The RMinE degree |
| | is an opportunity for the College of Education to capitalize on its strengths in the range of educational research |
| | methods. |
| | methods. |
| 2g | Describe the target audience. (150 word limit) |
| | Three types of students will be targeted. The quantitative methods concentration is aimed at those interested in |
| | developing quantitative models generally for research purposes. The evaluation/assessment concentration |
| | provides is targeted to students planning to continue with higher education, who are planning on starting |
| | evaluation firms, who are planning to work as evaluators or plan on applying evaluations to their current work. |
| | The research design area is appropriate for students interested in continuing in higher education, who would |
| | like to work in educational testing and assessment firms, who are interested in survey firms, or those already in the field of education who are looking at ways to develop better instruments. The target audience is also |
| | students who are traditionally hard to reach, such as working professionals, students with families, students |
| | without transportation, those who are located in remote areas, and students who live outside the U.S. |
| | |
| 2h* | Does the program allow for any concentrations? |
| | If "Yes," name the concentration(s). (Specific course requirements will be described in Section A, part 7.) |
| | Concentration #1: Quantitative Methods |
| | Concentration #2: Evaluation/Assessment |
| | Concentration #3: Research Design |
| | |
| 2i | Are necessary resources available for the proposed new program? (A more detailed Yes X No X |

NEW MASTER'S DEGREE Page 4 of 46

| | answer is requested in Section A, part 4.) | | |
|----|--|--|--|
| | | | |
| | | | |
| 2k | Describe how the proposed program will be administered, including admissions, student a (150 word limit) | advising, re | etention, etc. |
| | Admissions procedures and student expectations will follow the guidelines in the Universi Graduate Student Handbook and the specific policies of the Department of Educational Policy Evaluation's Graduate Student Handbook. Applications for the program will be accepted Spring admission. A sub-committee of faculty will review applications and make recomme faculty, who will arrive at an admissions decision for each case. Students from a variety of encouraged to apply to the program. To remain in good standing with the program, stude are making acceptable progress towards completion of the degree and remain continuous program. Students who are not making successful progress to completing their degree will advisor (or the DGS) to develop a plan for improvement. | olicy Studion for Summon andations to backgrounts onts must so | es & er/Fall and to the full ends will be show they d in the |
| 21 | Are multiple units/programs collaborating to offer this program? | Yes 🖂 | No 🗌 |
| | If "Yes," please discuss the resource contribution(s) from each participating unit/program. | | |
| | (Letters of support will be addressed in Part A, section 7.) | | |
| | Many of the courses that make up the program are cross-listed with EDP, and the program classes from EDP, EDC, and ELS. By using faculty and courses from other departments, stu program gain perspectives and skills from a range of educational fields. In determining condesigning research projects, the varied experiences of these faculty will provide insight in have the most positive and expansive experience. In addition, the program will rely on the College of Education's Online Teaching and Learning Support Team, its Next Generation Learning its Information Technology Center to provide guidance for faculty and students in dealissues. | dent enro mmittees a ways for s e support o earning Sti | lled in the and tudents to of the rategic Team |
| 2m | Are there any UK programs which the proposed program could be perceived as replicating? | Yes 🗌 | No 🖂 |
| | If "Yes," give a rationale for why this is not duplication, or is a necessary duplication. (250 | word limit | :) |
| | If "Yes," two pieces of supporting documentation are required. Check to confirm that appended to the end of this form is a letter of support from the who may perceive this program as a replicate. Check to confirm that appended to the end of this form is verification that the chair/diunit has agreement from the faculty members of the unit. This typically takes the form of | irector of t | the other |
| 2n | Will the faculty of record for the proposed new master's degree be the graduate faculty of the department/school offering the proposed new degree? If "No," please describe the faculty of record for the proposed master's program, including term of service; and method for adding/removing members. Will the existing director of graduate and the service of graduate an | _ | |
| | in the department/school be the DGS for this proposed master's degree? | | |

NEW MASTER'S DEGREE Page 6 of 46

⁴ An advisory board includes both faculty and non-faculty who are expected to advise the faculty of record on matters related to the program, e.g. national trends and industry expectations of graduates.

⁵ For questions about alternative delivery modes, please contact UK's Distance Learning Programs and e-Learning office (http://www.uky.edu/DistanceLearning/).

⁶ Per the Southern Association of Colleges and Schools Commission on Colleges (SACS) definition of distance education, distance education is a formal educational process in which the majority of the instruction (interaction between students and instructors and among students) in a course occurs when students and instructors are not in the same place. Instruction may be synchronous or asynchronous.

| | Modularized courses. |
|---------|--|
| | |
| | Give pedagogical rationale for the use of alternative delivery modes in the proposed program. Consider the aspects below and elaborate as appropriate. (200 word limit) |
| 3c | Synchronous and asynchronous components. |
| | Balance between traditional and non-traditional aspects. |
| | Hybrid elements. |
| | While the majority of the courses in the Master's program are offered in a face-to-face format, all coursework is available online, and it is structured such that a student can complete the RMinE degree without a campus visit. This gives students the flexibility to take courses in either format, but it does not limit participation by geographical location. Students located on-campus have the added benefit of being able to take the course in the format best suited for their education needs. In addition, the online portion of the program is offered asynchronously. This takes into account student learning differences, allowing students to revisit material as necessary and to progress through the content at their own pace. |
| 4 11V B | esources |
| | |
| 4a* | Will the program's home educational unit require new or additional faculty? Yes No |
| | If "Yes," provide a plan to ensure that appropriate faculty resources are available, either within UK or externally, to support the program. Note whether the new and additional faculty will be part-time or full-time faculty. If "No," explain why. (150 word limit) |
| | Course rotations have been carefully planned to enable the department to rotate courses in online and face-to- |
| | face formats to meet the course scheduling requirements. Deans and Chairs across the College are in support of |
| | moving the designated research courses to both formats and anticipate increased enrollment as these courses |
| | become accessible in a variety of delivery modes. The success and sustainability of the new degree will be |
| | supported by the multiple functions served by its individual course components. As it grows, funds generated by |
| | the program will support graduate teaching assistants and/or lecturers. This has the potential to strengthen |
| | doctoral degree programs as well since the TA positions can be used to recruit high caliber students. |
| | If "Yes," when will the faculty be appointed? (150 word limit) |
| | n/a |
| | |
| 4b | Will the program's home educational unit require additional non-faculty resources, Yes No |
| | e.g. classroom space, lab space, or equipment? |
| | If "Yes," provide a brief summary of additional non-faculty resources that will be needed to implement this |
| | program over the next five (5) years. If "No," explain why. (150 word limit) Given that there are no new faculty hires needed for the creation of this program, and that the program is being |
| | housed in an established department which currently has space to accommodate staff and graduate assistant, no |
| | new facilities are needed. Furthermore, the online nature of this program makes it so there is not an additional |
| | need for classroom facilities. As part of the program, students will have the ability to come in for lab hours in a |
| | computer classroom, however, this is similar to the format many professors in the EPE department have and |
| | should not require any additional classroom resources. Any equipment needed to support the development of |
| | online courses will be purchased through the eLII grant (Bradley, Kelly. "Methods in Education Online Degree |
| | Program." eLearning Innovation Initiative – University of Kentucky. \$141,247. Start Date: 5/16/15, End Date: |
| | 5/15/16) |
| | |
| 4c | Will the program include courses from another educational unit(s)? Yes No |
| | If "Yes," list the courses and identify the other educational units and subunits that have approved the inclusion |
| | of their courses. (150 word limit) |
| | The entire degree can be completed within EPE, however, the program is supported by several other programs |
| | within the College of Education. Many courses are already cross-listed with EDP, EDC, and EDL. By using faculty |
| | and courses from other departments, student enrolled in the program gain perspectives and skills from a range |
| | of educational fields. |
| | Courses to be included that are not cross-listed in the Department of Educational Policy Studies and Evaluation |
| | are: |

NEW MASTER'S DEGREE Page 7 of 46

unit has consent from the faculty members of the unit. This typically takes the form of meeting minutes.

| 5. Assessme | nt – Program Assessment and Student Learning Outcomes (SLOs) | | | | | | |
|--------------|---|--|--|--|--|--|--|
| | Referring to program objectives, student benefits, and the target audience (questions 2c and 2g), explain | | | | | | |
| 5a | how the <i>program</i> will be assessed, which is different from assessing student learning outcomes. Include how | | | | | | |
| | the faculty of record will determine whether the program is a success or a failure. List the benchmarks, the | | | | | | |
| | assessment tools, and the plan of action if the program does not meet its objectives. (250 word limit) | | | | | | |
| | For the programmatic assessment, student evaluations of the program, an examination of revenue | | | | | | |
| | generated, and an examination of student academic and professional outcomes after graduation will be | | | | | | |
| | examined. | | | | | | |
| | The benchmarks are as follows: | | | | | | |
| | Program course evaluations by students are reported are consistent with or above other programs in the college. | | | | | | |
| | Over one-half of all participants in the program are on-line participants. | | | | | | |
| | - The program recoups its costs and generates a positive income. | | | | | | |
| | Graduates of the program who were seeking work found jobs and were employed. | | | | | | |
| | - Graduates of the program who were planning to enter doctoral programs found sufficient programs. | | | | | | |
| | - Program evaluations demonstrate student success within the program. | | | | | | |
| | - Examination of final projects by students demonstrates students are meeting expected learning | | | | | | |
| | outcomes. | | | | | | |
| | - Students completed their program in the time-period they planned on at the beginning of entering | | | | | | |
| | the program | | | | | | |
| | Data related to these benchmarks will be used to adjust program quality. Courses not meeting expectations | | | | | | |
| | will be altered to ensure that student outcomes and quality expectations are being met. In addition, | | | | | | |
| | program faculty and staff will work to assure that students are aware of employment opportunities and | | | | | | |
| | academic opportunities. If the program is not meeting the expectation of having out-of-state and non- | | | | | | |
| | campus student enrollment, additional marketing efforts will be made. Finally, if revenue expectations are | | | | | | |
| | unsatisfactory financial alterations will be made with costs (depending on where the excess is identified) to | | | | | | |
| | assure the program becomes generating | | | | | | |
| | | | | | | | |
| 5b | (related to 2d and 14.c) Based on the SLOs from question 2c, append a PDF of the program's course map ⁹ to the end of this form. (Click HERE for a sample curricular map.) | | | | | | |
| | 10 | | | | | | |
| 5c | Append an assessment plan ¹⁰ for the SLOs to the end of this form. (Click HERE for a sample assessment plan.) | | | | | | |
| | | | | | | | |
| 6. Non-Cours | se Requirements | | | | | | |
| 6a | Will the program require completion of a bachelor's degree from a fully accredited Yes No | | | | | | |
| | institution of higher learning? | | | | | | |
| | If "No," explain below. (150 word limit) | | | | | | |
| | | | | | | | |

NEW MASTER'S DEGREE Page 16 of 46

⁹ Course mapping (or "curricular mapping") is a representation of how faculty intend to approach and assess each of the student learning outcomes identified for the courses for the degree program, with an emphasis on courses required for all degree candidates. It is a master chart that indicates which objectives are being met, to what extent, and how often. This identifies whether an objective is "introduced," "developed," and/or "mastered" within a given course; it may be helpful also to chart any classroom-based assessment measures used to demonstrate that claim.

 $^{^{10}}$ An assessment plan is typically a tabular grid that illustrates the artifacts, rubrics, assessment team, and periods of assessment for the SLOs.

| | The Graduate School requires applicants to have an overall GPA of 2.75 on | | | | | |

NEW MASTER'S DEGREE Page 23 of 46

SECTION B – INFORMATION REQUIRED BY CPE AND SACS

10. Program Overview – Program Quality and Student Success

10a

Highlight any distinctive qualities of the proposed program. Are any faculty nationally or internationally recognized for expertise in this field? Does this program build on the expertise of an existing locally, nationally, or internationally recognized program at UK? (300 word limit)

The UK College of Education is ranked as one of the top 100 colleges of education in the country. Faculty involved with the program are nationally-recognized speakers and authors in the field of research methods, quantitative methods, and evaluation/assessment. These faculty include: Kelly Bradley, Michael Toland, Beth Goldstein, Joe Waddington, John Thelin, Jane Jensen, Joseph Ferrare, Jungmin Lee, Jessica Hearn, and Joan Mazur. The resources of the College have been used to build a host of courses in the research methods area and provide support for the faculty teaching these courses.

10b*

(similar to 2b) What are the intended student learning outcomes (SLOs) of the proposed program? Address one or more of the five areas of learning – broad, integrative knowledge; specialized knowledge; intellectual skills; applied learning; and civic learning. (300 word limit)

A series of intended student learning outcomes have been developed in collaboration with the college, department, and involved groups. These intended goals relate directly to three of the five areas of learning. Specialized knowledge is reflected in the outcome that students leave the program with advanced ability and knowledge of quantitative methods, evaluation/assessment, or measurement. Furthermore, students are expected to have the ability to demonstrate these specialized skills through the evaluation of others' work and the production of their own work. Quantitative methods, evaluation/assessment, and research methods are all specialized as they require specific knowledge of advanced theoretical and analytical techniques which go beyond what the average individual can learn on their own or through work experience. Intellectual skills are reflected in the student learning outcome which reflects the ability of students to develop research questions and apply appropriate quantitative techniques. In addition, it is expected that students will leave the program with the ability to develop research plans and studies which address stated research questions, further demonstrating they have refined, applicable, intellectual skills. Finally, the program is largely rooted in the applied learning principle with student learning objectives being focused on skill-based competency. Students at the end of the program are expected to be able to implement an evaluation, create and test an assessment, or design and conduct an advanced quantitative research study. Furthermore, it is expected that students leaving the program will be able to identify needs in their respective fields where they could apply their specialized skills. Given the methods focus of this program, students are expected to develop their specialized skillset and be able to apply it when appropriate.

10c

Clearly state the student admission, retention, and completion standards designed to encourage high quality. (300 words)

Admissions procedures and student expectations will follow the guidelines in the University of Kentucky Graduate School's Graduate Student Handbook and the specific policies of the Department of Educational Policy Studies & Evaluation's Graduate Student Handbook.

Applications for the program will be accepted for Summer/Fall and Spring admission. A sub-committee of faculty will review applications and make recommendations to the full faculty, who will then review the recommendations and application folders and arrive at an admissions decision for each case. Students will be required to submit GRE scores, although there is no minimum GRE requirement. Students from a variety of backgrounds will be encouraged to apply to the program and ideally the program will include many students from outside the field of education who are interested in research methods. No minimum GPA is required for student admission. Admitted students will be allowed to transfer in 9 credit hours, however, the Director of Graduate Studies must approve of the credits. As with all EPE graduate degree programs, students admitted to the program must also be admitted into the University of Kentucky's Graduate School.

NEW MASTER'S DEGREE Page 24 of 46

To remain in good standing with program students must show they are making acceptable progress towards completion of the degree and remain continuously enrolled in the program. Students are placed on scholastic probation when they fail to maintain a GPA of at least 3.0, and they then have one semester, 9 hours, to attain a cumulative GPA of 3.0. Students who are not making successful progress to completing their degree will be contacted by their advisor (or the DGS) to develop a plan for improvement. Failure to remain in good standing or complete satisfactory progress towards completion of the degree may result in a student's termination from the program.

10d

Describe how the proposed program will articulate with related programs in the state. Include the extent to which student transfer has been explored and coordinated with other institutions. Note: Convert all draft articulation agreements related to this proposed program to PDF and append to the end of this form. (300 word limit)

No other program such as this one exists within the state, and as such, no transfer agreements have been made.

10e

Identify the applicant pool and how applicants will be reached. (300 word limit)

The applicant pool will be individuals interested, or currently working, in settings such as academic institutions; school districts; state and federal agencies; healthcare; and certification, licensing and testing organizations. It includes individuals wanting to develop academic and applied research skills; undertake commissioned research or evaluations; progress to doctoral study; as well those already working as a researcher or evaluator. Components of the program will also be useful to undergraduate education students requiring coursework in quantitative inferential reasoning, and to many existing graduate programs across the University of Kentucky.

Department instructors and administrators will reach out to other institutions throughout the country where this program is not available. The department will use its professional connections to locate potential students and contact them directly. Departments who express they have students interested will be sent promotional materials, and visits from individuals associated with the program will be facilitated when possible.

11. Mission: Centrality to the Institution's Mission and Consistency with State's Goals

11a*

specific institutional and societal needs that the program will address. (300 word limit)

There are three primary program objectives. The first objective is to establish a high-quality graduate degree that fills an important academic gap in higher education. The need for quantitative skills and quality evaluation services is continuing to grow as data-driven decision making and accountability become increasingly important in the public and private sectors. The number of individuals who have the skillset to meet this demand, however, is small, with even many highly educated individuals lacking the full range of quantitative reasoning and research method skills needed to meet employer demands. This program will focus on providing the quantitative reasoning and research methods skills that employers are seeking without requiring students to commit to a full Ph.D. program. Few programs such as this currently exist and

(similar to question 2c) List the objectives of the proposed program? These objectives should deal with the

The second objective is to develop a research based program which can be accessed by both traditional and non-traditional students throughout the state, country, and internationally, who are interested in education research methods but may not have physical access to the Lexington campus. This master's program helps to

development at this stage allows the University of Kentucky to be at the forefront of innovation in the field.

NEW MASTER'S DEGREE Page 25 of 46

make the university more diverse and inclusive, and provides educational access to groups, such as working individuals and those living in rural areas, who have historically had higher-education access issues.

Finally, this program seeks to serve as an income-generating program for the department. The on-line nature of the program allows for widespread access and ideally large enrollment with little strain on present department resources. Additional income would allow for the department to offer more scholarships, assistantships, higher new faculty, and take on new projects without the need to request additional funds from the state, university or private donors.

Explain how the program objectives above in item 11a support at least two aspects of <u>UK's institutional</u> mission and academic strategic plan? (150 word limit)

11c*

This program supports Goal 1 and Goal 4 of the University of Kentucky's institutional mission. Goal 1 of the mission is focused on educating Kentucky students to be leaders in the social and economic domains. Students of the program will leave with the ability to develop and evaluate programs in their respective topic of interest. In addition, students will leave with the ability to be innovators in developing and refining new assessment instruments to measure original ideas as they are developed. Goal 4 of the mission is focused on promoting inclusion and diversity. This program is able to promote inclusion and diversity by making the program available on-line, which means the program can reach students in remote areas, students in other states, and students internationally. The income-producing goal of the program allows for more funds to be used to provide scholarships and assistantships to underrepresented students in the department.

How do the program objectives above in item 11a support at least two aspects of the Council on Postsecondary Education's (CPE) Strategic Agenda and the statewide implementation plan? (300 word limit) This program supports the 'research, economic, and community development,' 'student success,' and 'efficiency and innovation' aspects of the CPE strategic agenda. In the 'research, economic, and community development' aspect, this program both educates Kentuckians in a highly profitable skillset and allows for these skills to be brought to areas throughout the state. Graduates of the program would be able to work in a range of public and private organizations throughout the state, as well as establish firms in underserved areas where there is a need for evaluation, measurement and quantitative methods. Furthermore, the online and flexible nature of the program allows for individuals already working in the public and private sector to learn these valuable skills and begin immediately applying them to their work throughout out the state.

In the 'student success' aspect, this program provides high-quality graduate-level education access to historically underserved rural communities. Many of the individuals living in these rural communities are low-income and have transportation issues which keeps them from being able to access high-quality graduate education. This program helps ensure that rural areas are having the same educational opportunities as urban and suburban areas.

In the 'efficiency and innovation' aspect, this is a program unlike any other being offered in the state and one of the newest of its kind in the country. Furthermore, students will be learning a skill set that can be used as the master's work foundation for a wide range of academic fields, such as agriculture, the social sciences, and business.

The program has considered the statewide implementation plan strategies. Regarding satisfactory funding, the program received a grant for program development (Bradley, Kelly. "Methods in Education Online Degree Program." eLearning Innovation Initiative – University of Kentucky. \$141,247. Start Date: 5/16/15

NEW MASTER'S DEGREE Page 26 of 46

End Date: 5/15/16).

If an approval letter from an Education Professional Standards Board (EPSB) is required, check the box below and append a PDF version of the letter to this form.

(E.g. any program leading to teacher, principal, or superintendent certification, rank change, etc.)

12. Resources

12c

How will the program support or be supported by other programs within the institution? For example, shared faculty, shared courses, collaborative research, etc. (300 word limit)

The program is supported by several other programs within the College of Education. For example, many of the courses that make up the program are cross-listed with EDP, and the program electives contain classes from EDP, EDC, and ELS. By using faculty and courses from other departments, student enrolled in the program gain perspectives and skills from a range of educational fields. This keeps the university and college from cross-duplicating material and creating unnecessary redundancy. Students will also benefit from the research experiences that come from working with faculty in different education departments. In determining committees and designing research projects, the varied experiences of these faculty will provide insight in ways for students to have the most positive and expansive experience.

In addition, the program will rely on the support of the College of Education's Online Teaching and Learning Support Team, its Next Generation Learning Strategic Team and its Information Technology Center to provide guidance for faculty and students in dealing with technological issues. By working with other groups in the college, this program is pulling from the various strengths of each group to provide the best experience for students.

The program supports other programs by being both online and asynchronous, so the courses offer a new level of flexibility for students. This is especially helpful for students enrolled in programs that require clinical work (such as in the department of Kinesiology and Health Promotions), because the required clinical hours often conflict with the schedule of traditional course offerings. Furthermore, programs that require measurement types of courses can utilize the courses offered within this program. Thus, students can take courses from faculty with research, evaluation and measurement expertise, and other departments do not have to seek adjunct professors to teach these courses.

What will be the projected "faculty-to-student in major" ratio? (150 word limit)

It is anticipated the starting faculty/student ratio will be about 1 to 3, however, it is expected that this ratio will grow. Given that this is an on-line program, it is not a concern should the program have high faculty/student ratios.

Describe the library resources available¹⁹ to support this program. Access to the qualitative and quantitative library resources must be appropriate for the proposed program and should meet recognized standards for study at a particular level or in a particular field where such standards are available. Adequacy of electronic access, library facilities, and human resources to service the proposed program in terms of students and faculty will be considered. (300 word limit)

The UK Libraries offers collections, services and other learning/information resources consistent with the degrees offered at the University. UK Libraries fulfills the University's educational, research, and service missions through the acquisition, organization, and preservation of relevant information resources that support the academic and research programs. The print collections are housed in the ten libraries across the campus and in the print archives. UK Libraries' resources include:

• 4 million volumes

NEW MASTER'S DEGREE Page 27 of 46

¹⁹ Please contact Institutional Effectiveness (institutional effectiveness @uky.edu) for more information.

- Distance learning library services and a distance learning librarian
- access to 100,000 current serials, including 70,000 electronic serials accessible on and off campus
- access to approximately 450 licensed networked electronic resources/databases
- 550,000 electronic books accessible on and off campus
- 100,000 audio/visual materials

In addition, full wireless capability in all campus libraries provides access to electronic resources within library facilities.

The College of Education branch library also DL support to COE faculty and students; its move toward status as a Distance Commons will further ensure program sustainability. Together with course instructors, the Education Librarian will develop customized research guides and literature reserves for each course.

12d

Describe the physical facilities and instructional equipment available to support this program. Physical facilities and instructional equipment must be adequate to support a high-quality program. Address the availability of classroom, laboratory, and office space, as well as any equipment needs. (300 word limit)

No new hardware or software will need to be purchased for student use for this program. Similarly, faculty will be able to continue use of the same software and hardware already in place for the development of the degree program. All necessary quantitative packages students will use are available for free through the university or are of very low-cost on-line. The program faculty and staff will not need any additional facilities. Given that there are no new faculty hires needed for the creation of this program and the program is being housed in an established department which currently has space to accommodate staff and graduate assistants, no new facilities are needed. Furthermore, the on-line nature of this program makes it so there is not an additional need for classroom facilities. As part of the program, students will have the ability to come in for lab hours in a computer classroom, however, this is similar to the format many professors in the EPE department have and should not put any additional need on classroom resources.

13. Demand and Unnecessary Duplication

Provide justification and evidence to support the need and demand for this proposed program. Include any data on student demand, employer demand, career opportunities at any level, or any recent trends in the discipline that necessitate a new program. (300 word limit)

13a*

- This evidence is typically in the form of surveys of potential students, enrollments in related programs at the institution, employer surveys, and current labor market analyses.
- Anecdotal evidence is insufficient. Demonstrate a systematic collection of data, thorough study of the data, and a reasonably estimated student demand for the program.
- Provide evidence of student demand at state and national levels.

According to the Bureau of Labor Statistics predicted job growth data, there is a strong need for the skills that students will learn in this program. For example, the need for quantitative methodologists is expected to grow at a much faster than average rate (27% from 2012-2022) and the need for survey researchers is expected to grow at a faster than average rate (18% from 2012-2022). Students who leave this program will be able to enter into these two fields, which are in need of skilled and trained applicants. Articles continue to come out discussing the importance of evaluation in the public and private sector, as well as articles on the importance of making data-driven decisions. Students leaving this program will be able to gather and analyze data at levels beyond the average master's degree holder. Given that the program is geared specifically towards these skills, students will be more valued in the market than other applicants who have only a few courses in the subject with a degree primarily in another field.

13b

Clearly state the degree completion requirements for the proposed program. (150 word limit)

To complete the program and receive their degrees, students will be required to complete a project-based final. Possible projects include preparing an evaluation report, preparing a technical report for a research

NEW MASTER'S DEGREE Page 28 of 46

| | project, or completing a research manuscript. The type and scope of project that dependent upon the student's interests and career aspirations, and will be approximative. | | · |

14. Assessment and Oversight

14a*

Describe program evaluation procedures for the proposed program. These procedures may include evaluation of courses and faculty by students, administrators, and departmental personnel as appropriate. Program review procedures shall include standards and guidelines for the assessment of student outcomes implied by the program objectives and consistent with the institutional mission. (300 word limit) Evaluation of the graduate program will be marked by success on measurable goals developed in four specific domains: (1) Accessibility – Accessibility will be assessed through the ease of delivery of the online courses and the enrollment of students from outside of EPE. Measures of success in this domain would include examining the success of students who did not take courses on campus and if students from outside of the College of Education are pursuing the graduate certificate. (2) Practicality – Practicality will be assessed in connection to the understanding of data driven and evidence based research, and if students can apply what they have learned to their academic and professional work. (3) Quality - Quality will be reviewed in connection to the College of Education faculty and instructors' experience and expertise in the areas and courses they teach. It will also be assessed in connection to the array of course offerings, with a target of at least 3 courses in each area of emphasis – evaluation, quantitative methods, and research design -- beyond the core. (4) Utility - Utility will be assessed in the ability of students to apply what they learned in the program immediately to their work or in the pursuit of employment.

The specific intended programmatic outcomes that will be evaluated are:

- to establish a high-quality graduate degree which fills an important academic gap in higher education.
- to establish a research based program which can be accessed by both traditional and non-traditional

NEW MASTER'S DEGREE Page 32 of 46

students throughout the state, country, and internationally.

- to serve as an income generating program for the department.

For the programmatic assessment, the following procedures will be used:

- Review of program course evaluations by students
- Review of generated revenue
- Analysis of exit surveys administered by the department
- Examination of program enrollment
- Examination of final projects by students
- Examination of student academic and professional outcomes after graduation
- Comparison of student program plans to actual program completion

Identify both the direct and indirect methods by which the intended student learning outcomes (SLOs) will be assessed. (300 word limit)

Direct methods of assessment for SLOs include grades on exams in select courses, grades on final projects for core courses, evaluation of culminating projects in the Writing course and for the final master's project according to program-level rubrics. Indirect methods include the exit survey for graduating students, and course evaluations.

14c Procedures for Course Mapping of SLOs (related to question 5b)

14c.i Which components will be evaluated, i.e. course mapping? (300 word limit)

The intended student learning outcomes to be evaluated are:

- Students will leave the program with the ability to develop research questions and apply appropriate analytical techniques. (Methodological Skills)
- Students are expected to have the theoretical knowledge related to research design and analysis. (Theoretical Knowledge)
- Students will leave the program with ability and knowledge of quantitative methods, evaluation/assessment, or research methods. (Analytical Ability)
- Students will leave the program with the ability to produce their own work, developing research plans and studies which address stated research questions. (Application of Knowledge and Skills)
- 14c.ii When will components be evaluated? (150 word limit)

Beginning in the second year, completed every three years.

14c.iii When will the data be collected? (150 word limit)

At the end of the first year.

14c.iv How will the data be collected? (150 word limit)

Data will be collected through student evaluations of the program, surveys of students who have graduated, through financial records, and a review of the current program participants.

14c.v What will be the benchmarks and/or targets to be achieved? (150 word limit)

The benchmarks are as follows:

- Program course evaluations by students are reported to be on-par or above other programs in the college.
- Over one-half of all participants in the program are out-of-state participants.
- The program recoups its costs and generates a positive income.
- Graduates of the program who were seeking work found jobs and were employed.

NEW MASTER'S DEGREE Page 33 of 46

| | - Graduates of the program who were planning to enter doctoral programs found sufficient |
|--------------|--|
| | programs. |
| | - Program evaluations demonstrate a positive view of the program. |
| | - Examination of final projects by students demonstrates students are meeting expected learning |
| | outcomes. |
| | Students completed their program in the time-period they planned on at the beginning of |
| | entering the program. |
| | entering the program. |
| 14c.vi | What individuals or groups will be responsible for data collection? (150 word limit) |
| 140.01 | Faculty and staff associated with the program as well as the department's Evaluation Center. |
| | ruddicy and stan associated with the program as well as the department's Evaluation Series. |
| 14c.vii | How will the data and findings be shared with faculty? (150 word limit) |
| | Data and findings will be shared with appropriate faculty committees who will analyze and report |
| | findings to the full program faculty. Assessment data will also be shared with college wide committees. |
| | Both will occur on an annual basis. |
| | |
| 14c.viii | How will the data be used for making programmatic improvements? (150 word limit) |
| | This data will be used to adjust program quality. Courses not meeting expectations will be altered to |
| | ensure that student outcomes and quality expectations are being met. In addition, program faculty and |
| | staff will work to assure that students are aware of employment opportunities and academic |
| | opportunities. If the program is not meeting the expectation of having out-of-state and non-campus |
| | student enrollment, additional marketing efforts will be made. Finally, if revenue expectations are |
| | unsatisfactory financial alterations will be made with costs (depending on where the excess is identified) to assure the program becomes revenue-generating. |
| | to assure the program becomes revenue-generating. |
| 14c.ix | What are the measures of teaching effectiveness? (150 word limit) |
| 2 1011/ | Measuring teaching effectiveness will take into account student success in the classroom and teacher |
| | course evaluations. Faculty mentors and administrators will provide additional feedback to ensure |
| | effective teaching. |
| | Circuive teaching. |
| | What efforts to improve teaching effectiveness will be pursued based on these measures? (150 word |
| 14c.x | limit) |
| | Workshops will be either sourced externally or developed in-house to address any appropriate |
| | issues. In addition, faculty will make use of existing university resources, such as the Center for |
| | Enhancement of Learning and Teaching (CELT). |
| | Elinancement of Learning and Teaching (CELT). |
| | |
| 14c.xi | What are the plans to evaluate students' post-graduate success? (150 word limit) |
| | Surveys will be conducted with graduates and employers of graduates. The survey will focus on student's |
| | perceived success, record of employment and academic enrollment, as well as include the employer's |
| | perspective of how well the program graduate is meeting their needs. Surveys of graduating students will |
| | occur annually. Surveys of student employers will occur every three years. |
| | |
| 15. Cost and | Funding of the Proposed Program ²² |
| 15a | Will this program require additional resources? |
| | If "Yes," please provide a brief summary of additional resources that will be needed to implement this |
| | program over the next five years. (300 word limit) |

NEW MASTER'S DEGREE Page 34 of 46

For questions about cost and funding of the program, please contact your department chair, business officer, or associate dean for academic affairs.

Research Master's in Education (RMinE) Course Map

The focus is of this program is on educational research methods in students' respective concentrations. Each class that a student takes is intended to add additional methodological, theoretical, analytical, or applicable knowledge and capabilities. The Student Learning Outcomes are:

- Students will leave the program with the ability to develop research questions and apply appropriate analytical techniques. (Methodological Skills)
- Students will leave the program with theoretical knowledge of research design and analysis. (Theoretical Knowledge)
- Students will leave the program with ability and knowledge of statistics, evaluation/assessment, or measurement. (Analytical Ability)
- Students will leave the program with the ability to produce their own work, developing research plans and studies which address stated research questions. (Application of Knowledge and Skills)

The table below demonstrates how each course addresses the program's student learning outcomes.

| Courses | Methodological Skills | Theoretical Knowledge | Analytical Ability | Application of Knowledge and Skills |
|--|--------------------------|--------------------------|-----------------------|---|
| EPE/EDP 557 | X | | X | X |

| Independent Study | Mastered | Mastered | |

Students' educational or professional interests and goals determine which courses they take, but as the table demonstrates, by participating in required courses and electives, students will have a range of experiences which address the program's student learning outcomes. Also, as the chart shows, most of the classes are based in the application of skills and knowledge, further demonstrating that this is a program designed to be highly applicable to students. The administrators of the program carefully selected which courses would lead to desired student learning outcomes and discussed with faculty the content of their course to ensure that course objective aligned with the program's student learning outcomes.

Appendix D

Assessment Plan

Item 5c

1. Introduction

Assessment Plan for Research Master's in Education College of Education Department of Educational Policy Studies and Evaluation

Unit Mission Statement:

Students will develop a foundation in basic research methods in education as well as a focused area of emphasis in quantitative methods, assessment/evaluation, or research design. They will apply research methods, techniques and constructs to real world education settings, issues, and data sets.

Basic Assessment Approach:

Assess all outcomes throughout the course of the program, using direct and indirect methods, with an emphasis on the application of knowledge to real-world settings.

Assessment Oversight

The RMinE program director will be responsible for overseeing the evaluation of how well the program is meeting its intended outcomes and goals.

Program-Level Learning Outcomes

A series of intended student learning outcomes has been developed in collaboration with the college, department, and involved groups. The focus is of this program is on educational research methods in students' respective concentrations. Each class that a student takes is intended to develop methodological, theoretical, analytical, or applied knowledge. The Student Learning Outcomes are:

Outcome 1: Students will leave the program with the ability to develop research questions and apply appropriate analytical techniques. (Methodological Skills)

Outcome 2: Students are expected to have the theoretical knowledge to appropriately frame research design and analysis. (Theoretical Knowledge)

Outcome 3: Students will leave the program with ability and knowledge of quantitative methods, evaluation/assessment, or measurement. (Analytical Ability)

Outcome 4: Students will leave the program with the ability to produce their own work, developing research plans and studies which address stated research questions. (Application of Knowledge and Skills)

Curriculum Map

| Independent | | | |
| Study | | | |

Assessment Methods and Measures (Formative and Summative) (direct and indirect methods/measures used at the course and program levels)

Direct Methods:

- Exams from EPE 557, 558, 660
- Scholarly paper using program rubric (In Development)
- Project from a core course such as EPE 619, EPE 620, or EPE 663, selected by program director/ advisor and evaluated using the program rubric (examples included at end of document)

Indirect Methods:

- Graduating Student Exit Survey
- Course Evaluations

Data Collection and Review

| Assessed | Student Learning Outcomes | Data 1 | Data 2 |
|----------|--|---|---|
| Year 2 | Outcome 1: Students will leave the program with the ability to develop research questions and apply appropriate analytical techniques. (Methodological Skills) | Core Course Project (e.g., final project from EPE20, EPE663 or EPE619) -evaluated using the program rubric -gathered yearly | Grades, GPA -Processed by program director -Gathered Yearly |
| Year 2 | Outcome 2: Students are expected to have the theoretical knowledge to appropriately frame research design and | Core Course Project (e.g., final project from EPE620 or EPE619) -evaluated using the program rubric -gathered yearly | Grades, GPA -Processed by program director -Gathered Yearly |

| Year 1 | analysis. (Theoretical Knowledge) Outcome 3: Students will leave the program with ability and knowledge of quantitative techniques, evaluation/assess ment, or measurement. (Analytical Ability) | Exam Grades from 557, 558, 660 -Processed by Program Director -Gathered yearly | Grades, GPA -Processed by program director -Gathered Yearly |
|--------|---|--|---|
| Year 3 | Outcome 4: Students will leave the program with the ability to produce their own work, developing research plans and studies which address stated research questions. (Application of Knowledge and Skills) | Final Master's Project -Evaluated by student's committee using the program rubric -Gathered Yearly | Grades, GPA -Processed by program director -Gathered Yearly |

Assessment Cycle and Data Analysis

Assessment of student learning takes place throughout the program and occurs in all courses. Course rubrics are aligned to program objectives. Program faculty will be asked to maintain records of course-level assessment. The program will follow a three-year assessment cycle. Data will be gathered annually for all outcomes, with one outcome being analyzed and interpreted in year one, two in year two, and one in year three.

Results will be analyzed and interpreted at the Fall faculty retreat. Assessment reports will be completed by mid-fall and turned in to the college's assessment coordinator for review. Final reports will be sent to the university's assessment office no later than October 31st of every year.

Teaching Effectiveness

All instructors will use the University Teacher Course Evaluation process to be evaluated by their students each semester. Additionally, surveys will be developed and administered to students related to the application of coursework to their real-world settings and to the effectiveness of the instruction in the program. In addition to the College of Education faculty evaluation process already in place, the Department Chair will review the course evaluation results and provide feedback to the instructor. This will occur on an annual basis.

What are plans to evaluate students' post-graduate success?

Graduates of the program will take an exit survey. Alumni will be examined in EPE database of current employment.

Appendices

Outcomes 1 and 4 will be evaluated using program-level rubrics, which are currently under development.

- -Assignments and rubrics for
 - Final Master's Paper
 - A piece from a course of student/committee choice, for example
 - o Project for EPE 619 (example below)
 - o Project for EPE 620 (example below)
 - o Project for EPE 663

Survey Instrument and Methodology (EPE 619)- example from Dr. Bradley's class, to be updated as course is revised

Methodological Framework

Directions: Using your pre-approved topic, you are to construct a methodological framework for your own survey, by responding to the tasks below. Please double space and use at least 12-point font in your responses (with the exception of the question grid). Points (listed by each question) are assigned based on *accuracy and thoroughness* of your response. See me with questions. Good Luck!

- 1. Objectives of the survey research {5 points}
 - State the objectives of the survey clearly and concisely.
- 2. Target Population and Sampling Frame {10 points}
 - Define the target population.
 - Specify the sampling frame.
- 3. Sample Design {10 points}
 - Specify the sampling design.
 Will the design provide sufficient information for the objectives?
 - State the desired number of responses, along with the corresponding response rate.

How will you ensure an adequate response rate?

- 4. Method of Measurement {10 points}
 - Specify the method of measurement (such as personal interview, mailed questionnaires).
 - List the strengths and weaknesses associated with the method?
- 5. Instrumentation {15 points}
 - Create a question matrix. For each question on your survey:
 - 1. indicate how the question relates to the literature
 - 2. indicate the purpose of each question, i.e., what is being gained by asking the question
- 6. Pretesting (Field Test) {5 points}
 - Outline the pretesting procedures.

Will you use a sample, experts, etc? Is there a defense of this choice?

- 7. Organization of Data Management {5 points}
 - Outline how each piece of datum is to be handled for all stages of the survey.

This should include steps for processing data from the time a measurement is taken until the final analysis is completed.

- 8. Data analysis {15 points}
 - Outline the data analyses.

This should include detailed specification of what analyses are to be performed.

Final Project for EPE 620 Dr. Hearn

Prepare an evaluation plan. Specifics follow.

Introduction:

This section provides information about the purpose of the evaluation, and what stakeholders are—or need to be—involved in the evaluation. This gets to the relevance, need, and context.

Connects topic to a national (or state) or theoretical context. This is the big picture. Rationale and magnitude addressed by the program to be evaluated (who is affected) should be clearly stated. Show why the topic is important. Show the need. If there are national/state statistics they go here.

Move into the local context: tie the big picture into the local. For example, I might say "Similar to national trends, the reading scores for African American males at ABC middle school are lower than others in the same school. The school is comprised of......" and go on to describe the school, demographics, SES, etc. Then I would shift to the program being evaluated by saying "To address this need, ABC middle school implemented the A+ Reading program in 2011. "

The program: (this could also go down in the description of what is being evaluated) Fully describe the program. Things to include might be:

- Program purpose
- What are the specific goals of the program? [Just a note, as an evaluator it is usually easiest to start with the goals for the evaluation. Did they reach their goals?].
- How is the program implemented?
- What are the components? Who does it? When?

There needs to be enough information here to explain the program.

Evaluation Purpose (you may choose to move this based on how your paper flows.)

- What does this evaluation strive to achieve?
- What is the purpose of this evaluation?
- How will findings from the evaluation be used?

<u>Address Stakeholders somewhere</u> (you may choose to move this based on how your paper flows.)

- Who are the stakeholders for this evaluation?
- How do you plan to engage these stakeholders when implementing the individual evaluation plan (e.g., participate in collecting data, help to interpret findings)?

[Cite at least two sources in your introduction]

Rubric goals for introduction:

- Connects topic to a national or theoretical context. Rationale and magnitude addressed by the program to be evaluated (who is affected) clearly stated.
- Program named and major components succinctly described in particular theory, objectives, type of interventions.
- Relevance of evaluation clearly specified including value for field, and potential for application beyond this specific program.
- Used at least 2 references.

Review of literature/review of other evaluations

[use at least three (3) references in here as a solid foundation.]

What have others found before? Have there been evaluations of the program or similar programs? Is there theory behind the program? How have they approached finding their answers? If there aren't evaluations, then what does scholarly research indicate should be done? Basically, you need to discover "best practices" as a benchmark so you can compare your program against that or be able to argue that the components are different which would impact the results of your evaluation.

For example, if a school developed their own reading program (never been evaluated before), I would have to go to the literature to see what things *should* happen in a good reading program to serve as mirror for the new program. This information will help explain results and determine the best approach to evaluation and guide your recommendations if you were to actually do the evaluation.

Rubric Goals for Review of literature/review of evaluations

- Inclusion of relevant reports of evaluations of similar programs.
- Thorough systematic review of evaluations including description of program evaluated, assessment of quality of reviews, findings and strengths and weaknesses of evaluations
- Clear and convincing explanation of extent of relevance of literature to this program evaluation; systematic discussion of similarities and dissimilarities.
- Used at least 3 references.

Description of What is Being Evaluated

This can be a standalone section or woven into the introduction. This section provides detailed information about what you are evaluating. In this section describe the need, context, target population, and stage of development of what is being evaluated. You will also provide information on inputs, activities, outputs, and outcomes and will develop a logic model (graphical depiction) of what you are evaluating.

Need

What is the need for what you are evaluating?

Context

What context/environment exists for what is being evaluated?
 (i.e., what environmental factors may affect the performance of what is being evaluated)

Target Population or sample

• Who is the target population? (if applicable)

Stage of Development (this helps guide and justify your approach)

- How long has what is being evaluated been in place?
- Can you tell how it got started? Any historical information?

Insert a logic model and narratively describe your logic model. [OUTCOME 2]

Rubric Goal for Description section

• All key items are addressed and descriptions are complete

EVALUATION DESIGN

This section provides information on how you will design your evaluation. Provide information on evaluation questions, stakeholder information needs emerging from the evaluation, and the evaluation design.

Evaluation Questions [OUTCOME 1]

What specific questions do you intend to answer through this evaluation?

Evaluation Design [OUTCOME 2]

- What will be the evaluation approach/model (process, outcomes, economic, client satisfaction, impact, needs assessment, etc.)? Explain why it is appropriate and cite.
- Will the evaluation be quantitative, qualitative, or mixed-methods? Explain why it is appropriate and cite.

Rubric Goals for Evaluation Design section

- Evaluation design and model clearly specified
- Evaluation design allows for answering the evaluation questions
- Limitations of evaluation design to answer the evaluation questions are clearly described
- The quantitative or qualitative methods and techniques to be used are clearly and fully described.

Data Collection

This section provides information on how you will collect/compile data for your evaluation. Provide information on methods by which you will collect/compile data, and how those methods are related to the evaluation questions you identified.

Data Collection Methods [OUTCOME 1,3]

- Will new data be collected/compiled to answer the evaluation questions or will secondary data be used?
- What methods will be used to collect or acquire the data? Will you be conducting interviews, focus groups, using existing surveys, developing a survey (online or paper?), observations, artifact review, etc. (Each method has its own protocols and specific training. Be familiar with them here, but in order to DO the evaluation, you would need more in-depth training.).
- Will a sample be used? If so, how will the sample be selected?
- From whom or from what will data be collected (source of data)?

Data Collection Method – Evaluation Question Link [OUTCOME 1,3]

• How does each data collection method relate to the evaluation questions proposed?

Table F.3: Evaluation Questions and Associated Data Collection Methods

| Evaluation Question | Data Collection Method | Source of Data |
|---------------------|------------------------|----------------|
| 1. | | |
| | | |
| 2. | | |
| | | |
| | | |

Rubric Goals for Data section

- Data collection clearly address the evaluation questions
- Data are clearly linked to outputs, outcomes or impact being measured
- All data sources and sample information are provided.
- Data collection techniques are clearly and fully described

Evaluation Management

This section provides information about how the individual evaluation will be managed and implemented and who will participate in what capacity. It will also provide a timeline for conducting activities related to this evaluation. You may find that some of the tables suggested here fit better in other sections of the plan. Regardless of how you structure your plan, it is important that you carefully think about each of these implementation steps and who is responsible for doing what by when.

Develop a timeline:

| Task | Who's responsible | Start | Due |
|------|--------------------|-------|-----|
| | Example: evaluator | | |
| | or internal person | | |

Timeline

- When will planning and administrative tasks occur?
- When will any pilot testing occur?
- When will formal data collection and analysis tasks occur?
- When will information dissemination tasks occur?
- Upon mapping all of the above are there any foreseeable bottlenecks or sequencing issues?
